SalesHQ

CRM meets Slack — built for humans & AI agents to work together

Merdan & Bayram

Problem

- **Scattered context** – information lives across dashboards, CRMs, and endless bot DMs.

- **Bot noise** – each new agent multiplies pings, making real insight easy to miss.

- **Opaque actions** – reps can't see why an agent acted or amend the output in-line.

- **Fragile scaling** – approval workflows, permissions, and audit trails don't map cleanly onto Slack/Teams.

Solution

- A live deal dashboard

- Account-specific chat rooms

- Silent inter-agent communication

- Human-in-the-loop controls

Demo

Tech Stack

- AI agents on **AgentKit**

- Intelligence from **Claude 4**

- Inter-agent communication via **A-2-A protocol**

- Website crawling via **Apify MCP**
